

Introducing Generic ATE PXI Based Multi-Tester.

The GATE system from TBG Solutions offers cost effective test solutions for all your requirements. From low volume high value, to mass produced products. The approach is simple, by using core reusable hardware assets and TBG's powerful software, only the quick release interconnect fixture will change for each product under test.

TBG Combined Testing

Compact design with high speed digital, analogue data acquisition and boundary scan capabilities. Suitable for both functional and in circuit test applications. All from one box!

GATE is also expandable for all your future test requirements and backwards compatible with your legacy fixtures (Teradyne, Genrad, HP/Agilent, etc).

TBG also offers a full fixture or custom interface PCB design and manufacturing service for GATE systems.
